

ZTDS: Zero-Trust Data Sanitization Security Architecture (Publication-Grade)

1. Client Endpoint (Enterprise User)

Browser / IDE / Thin Client

ZTDS Volatile Sanitization Runtime (S_RAM)

Tab-Isolated • In-RAM Only • Non-Persistent

DFA Definition Engine

- 25+ Entity Profiles
- Deterministic Automata
- Streaming Scanner
- Strict Offset Order

Tokenization Pipeline

- Session Token Map $K_s \leftrightarrow I_s$ (Injective)
- No Disk / no Persistent Storage
- Constant-time Lookup

Reverse Rehydration Engine

- 1-Click Reveal (Tab Local) • Lossless Reconstruction

Session Controls

- Ephemeral State in RAM (Heap Only)
- Auto-Clear on Close / Idle Timeout
- No Local Logs of Raw PB

Endpoint Assurance

- Device Attestation (Optional)
- WebAuthn / TPM / Platform Keys
- Origin Policy Enforcement

1

Sanitized Query Q_T (tokens only)
